

# East Ocyon Bio Pvt. Ltd.

Allogenic Cell & Gene Therapy

## Job Openings at East Ocyon Bio Pvt. Ltd.

**Organization** - East Ocyon Bio Pvt. Ltd. is a start-up organization solely focused on developing and manufacturing global quality cell therapy products exclusively in India. The organization is in an exciting phase of establishing its R&D technology platform. It is looking for bright scientific talents who can work towards developing cell therapy products adhering to global quality systems from the early stages of development and be part of this organizational growth journey. There are two open positions for qualified scientists.

**Job Location** – Delhi NCR

### Position 1 – Cell culture and cell therapy process scientist

**Qualification** – M.Sc. or M.Tech. or Ph.D. in biological sciences field.

**Experience** – 2 – 4 years of relevant industry/academic experience.

**Skill area** – Cell culture and handling of primary blood cells

**Compensation** – As per industry standard

**Role Description** – The candidate in this role would be responsible for conducting research in the area of cell therapy product development. Activities involved include, but not limited to handling of PBMCs, cell lines, primary blood cells, culturing and maintenance of these cells, conduct genetic manipulation, develop and perform functional assays to evaluate the cell therapy products.

The suitable candidate is expected to have hands-on experience in working with PBMCs, primary blood cells fractionation, culturing and maintaining T-cells/NK cells. It is preferable to have a good understanding or have gone through training in developing and validating purity, potency and stability assays for cell-based products. Candidate should have a strong understanding of cell biology and immunology fields. Candidate should be able to work independently with minimal supervision while conducting scientific experiments and record keeping. Candidate must have good communication and documentation skills.

# East Ocyon Bio Pvt. Ltd.

Allogenic Cell & Gene Therapy

## Position 2 – Molecular biology scientist for cell therapy research

**Qualification** – M.Sc. or M.Tech. or Ph.D. in biological sciences field.

**Experience** – 2 – 4 years of relevant industry/academic experience.

**Skill area** – Recombinant DNA technology and gene editing technology

**Compensation** – As per industry standard

**Role Description** – The candidate in this role would be responsible for generating recombinant DNA constructs required for the genetic manipulation of primary blood cells to create cell therapy products.

The suitable candidate must have experience of working with DNA/RNA samples, conduct genetic manipulation to create recombinant DNA vectors. Experience/exposure to working of gene editing platforms such as CRISPR/Cas system is desirable. Candidate should be able to work independently with minimal supervision while conducting scientific experiments and record keeping. Candidate must have good communication and documentation skills.
